EDUCATION

Carleton College Northfield, MN
B.A. in Computer Science, Minor in Math 2022 – 2026
GPA: 3.21 / 4.00
Honors: Posse Foundation Full-Tuition Leadership Scholarship (2022 – 2026)

LEADERSHIP & ACTIVITIES

TRIO Student Support Services 2025 – 2026
Focusing on Cultivating Scientists 2022 – 2026
Carleton Office of Intercultural Life 2022 – 2026

TECHNICAL SKILLS

Programming: Python, Java, C/C++, LaTeX
Security & IT: Splunk, Nessus, Palo Alto Firewalls, Jamf, K1000, TeamDynamix, Duo
Platforms: Linux, Microsoft 365, Google Workspace
Cybersecurity: Security Monitoring, Vulnerability Mgmt, Phishing Response, Incident Response, Honeypots, Network Security

EXPERIENCE

Assistant Hardware Asset Manager 📍 Northfield, MN
Carleton College, Information Technology Services 📅 July 2026 – Present

- Imaged and deployed 100+ computers using K1000 and Jamf for faculty and staff onboarding, configuring endpoints and preparing systems for deployment.
- Supported the ordering and purchasing process for 300+ computers and managed hardware inventory through tagging, tracking, and asset management procedures.
- Provided Tier 1 and Tier 2 technical support through phone, in-person, and ticket-based workflows, troubleshooting hardware, software, account, printer, and connectivity issues.
- Administered Duo account support, including password resets and account access troubleshooting, while documenting detailed resolutions in TeamDynamix.
- Performed data transfers between computers while working to prevent data loss and supported users with Microsoft 365 and Google Workspace.
- Communicated technical issues and solutions in plain language while working with users with varying levels of technical experience.

Information Security Assistant 📍 Northfield, MN
Carleton College, Information Technology Services 📅 January 2024 – June 2026

- Monitored and investigated security events using Splunk and Nessus to identify potential threats, vulnerabilities, and suspicious activity across campus systems.
- Built Splunk queries, dashboards, and visualizations to analyze security data and identify patterns in network traffic and security events.
- Configured and monitored honeypots to observe common username and password attacks and gain practical experience analyzing attacker behavior.
- Assisted with Palo Alto firewall security and campus network defense activities, gaining hands-on experience with network security controls.
- Reviewed Nessus vulnerability scans, investigated findings, and learned remediation and backporting processes for identified vulnerabilities.
- Worked extensively with Linux servers and command-line administration while supporting security operations and system access.
- Supported phishing incident response by identifying malicious messages, helping contain affected accounts, and assisting with account remediation following compromises.
- Helped develop and set up cybersecurity training materials covering Nessus and Splunk for IT staff and campus users.

Assistant Data Scientist 📍 Northfield, MN
Carleton College, Academic Technology, DataSquad 📅 September 2024 – June 2026

- Analyzed school operations data from spreadsheets and CSV files to identify trends and support data-informed decision-making.
- Cleaned, verified, and organized datasets to maintain data integrity and improve the reliability of analysis and reporting.
- Created data visualizations designed to communicate findings clearly without overwhelming stakeholders with unnecessary information.
- Collaborated with clients and staff to clarify project requirements and ensure deliverables addressed the intended business

or operational need.

- Wrote reusable, well-documented code and clear technical instructions so projects could be maintained and used by others.

Research Intern

Texas Advanced Computing Center

 Austin, TX

 June 2024 – August 2024

- Investigated decision-making models that integrate human preferences into AI systems as part of research on fairness and interpretability.
- Applied game theory to model strategic interactions between AI agents and analyze equilibrium behavior in competitive environments.
- Translated mathematical equations and research concepts into algorithms and computational simulations for experimental analysis.
- Implemented a Pareto accumulation algorithm to integrate human preferences into game-theoretic simulations.
- Designed and executed experiments, collecting and visualizing performance data to evaluate different AI strategies.
